RQ1 | Reported quality phenomena

Three complementary facets of a reported quality problem

AFFECTED ARTIFACT Where?	PHENOMENON What condition?	MANIFESTATION How does it appear?
Program, source, or circuit instance	Program, state, or dependency inconsistency	Diagnostic or quality indicator
Tool or platform component	Structural, design, or integration inadequacy	Specification-relative output discrepancy
Generated or transformed artifact	Analysis or test-assessment inadequacy	Operational failure or noncompletion

Distinct facets; no one-to-one mapping or causal relationship is inferred.
